## THE EVOLUTION OF GAMING.

Engaging the Next Generation of eSports,  
on the Blockchain with eGI Token.

[www.exgame.io](http://www.exgame.io)

“eSports is prime real estate for custom currency. Gamers are already used to purchasing credits on gaming platforms and inside games, as well as on streaming platforms. Gamers also tend to be early adopters of new technology.”

*-Sports Insider*

## eGame's Mission

**Using the power of blockchain technology to provide better and more interactive experiences.**

eGame creates meaningful engagement like never before between fans and players of esports.

On the eGame Platform, users create communities, provide insight, create fantasy tournaments, engage in safe betting, and sponsor the growth of up-and-coming players all over the world.

## eSports and the Cryptocurrency Market

The rapidly growing industry known as eSports has redefined the term “sports” with hundreds of million of views world-wide and market size in the hundreds of millions.

Consisting of a younger demographic that is technically savvy and cryptocurrency supportive, the combination of eSports and cryptocurrency is set to take the sports market by storm.

# eGame Platform

**The eGame platform technology integration  
for the expansion and promotion of eSports.**

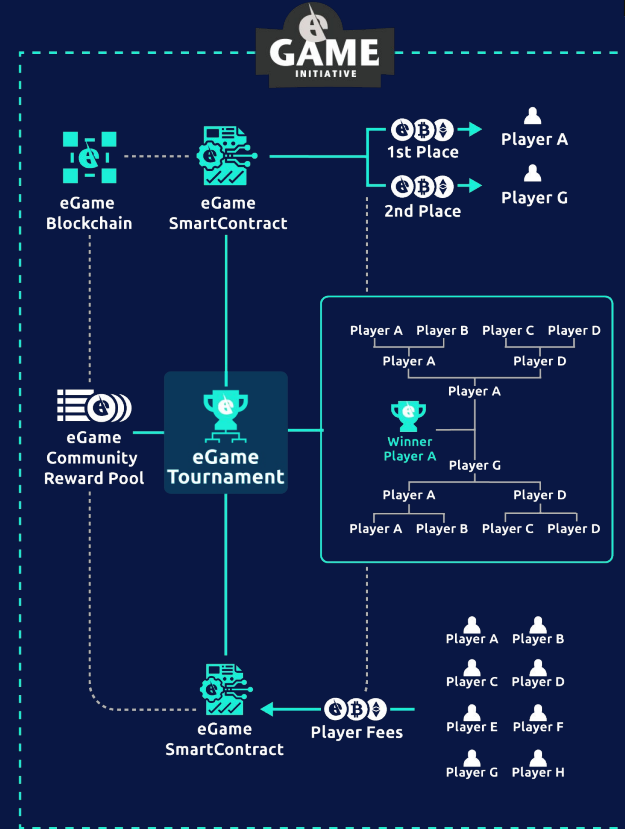

The eGame platform is built on blockchain technology, thus enabling smart contract technology and the native eGame token eGI usage across a range of features available to eSports players and fans.

# eSports Tournaments

Tournaments are a vital source of revenue for all eSports players, as well as essential promotional tools for eSports sponsors.

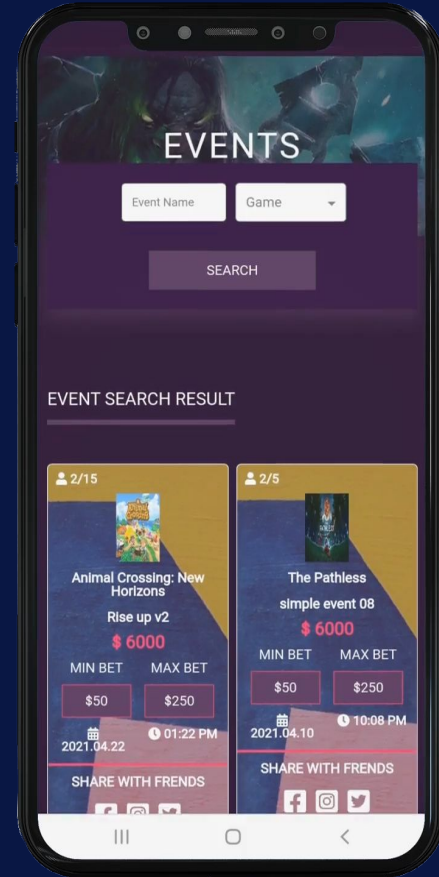

The eGame platform is powered by the blockchain and smart contracts, promoting tournaments to foster the growth of eSports.

## Community Engagement

Community is essential in eSports. eGame enables teams or individual players to create their own moderated communities where they interact with their fans.

By implementing smart contract technology with cryptocurrency, community creators incentivize community participation and monetization their content.

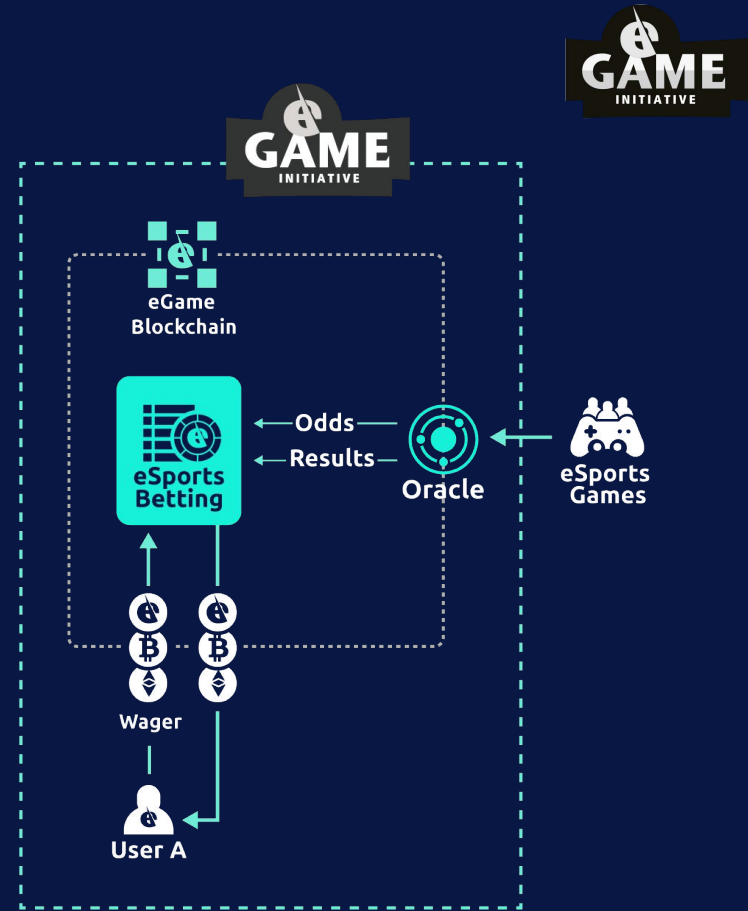

# eSports Betting Features

# House Bets

The eGame platform offers odds and takes bets on tournaments, events, and select matches.

Bets and payout are in the eGI token with the option to wager instead using one of the major cryptocurrencies.

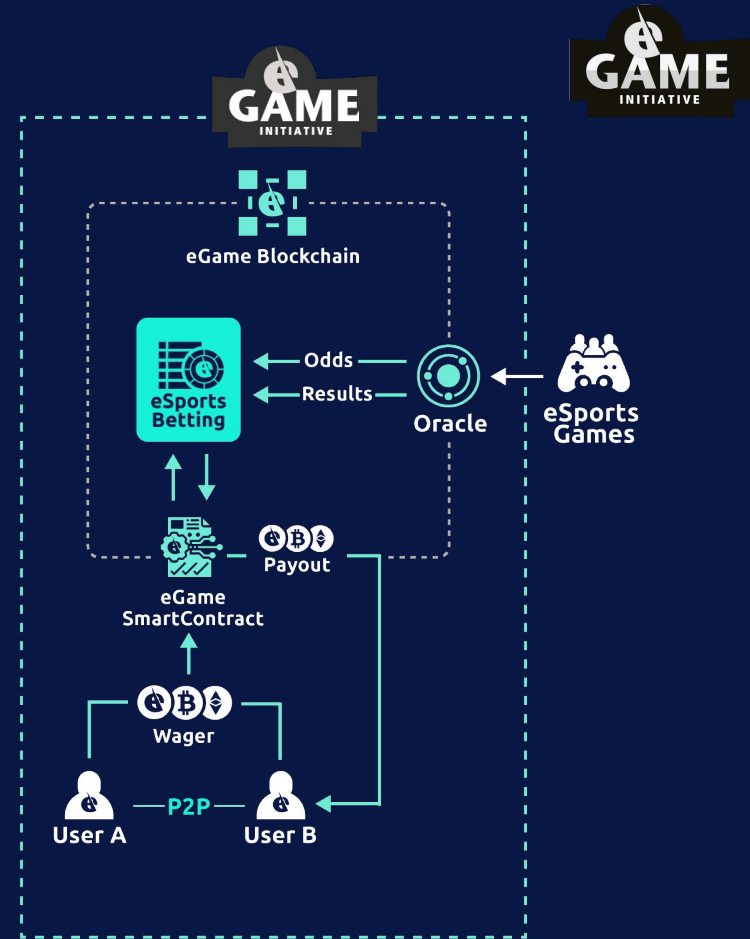

## P2P Bets

Individual users may directly place bets with one another on matches and tournaments with the option enabled.

Player-to-Player (P2P) bets are secured via smart contract technology and meticulous in-house moderation.

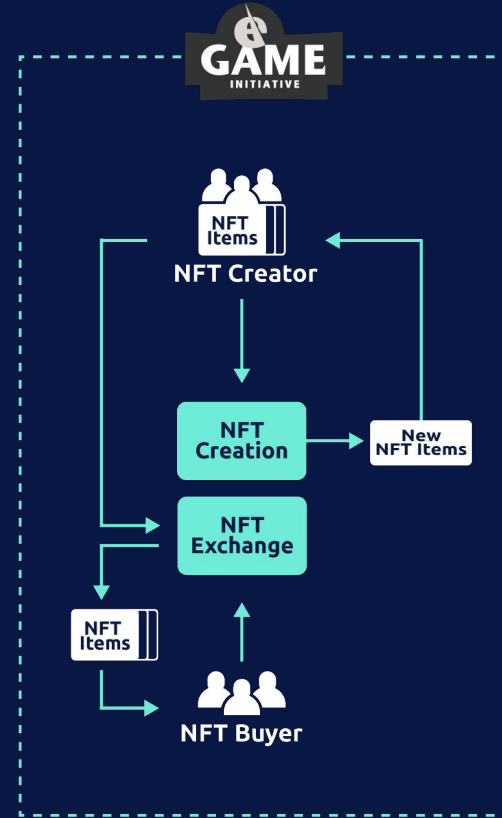

## NFT Exchange

A non-fungible token, or NFT, is a digital good, usually a media file such as an image or video, which is inextricably linked to a digital hash on the blockchain which affirms the actual owner of the original property.

**NFT Creation:** Through the platform players can create their own NFTs. It can be images or even video during a game. (Memorable events captured via NFT)

**NFT Trading Platform:** NFT creators and traders can then auction their NFTs on the NFT Trading platform.

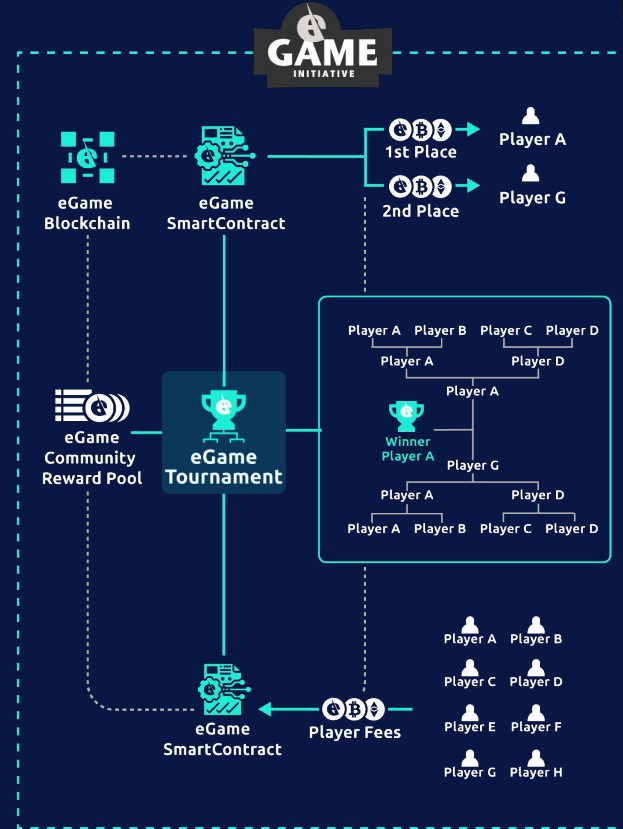

## eGI Staking

eGame allows users to get more engaged with the platform through eGI staking models.

By staking, eGI users can get access to Exclusive Bets and be more involved in communities, allowing them to earn eGI rewards.
